#### **DETAILED ACTION**

#### Election/Restrictions

1. Applicant's election without traverse of Group I (claims 1-12) in the reply filed on 10/18/05 is acknowledged.

### Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over either one of Jennings or Ishizuka et al taken together with Goodnight, Jr. et al.

Jennings and Ishizuka et al disclose meat analogues containing soy protein material (e.g. Abstracts of each). The claims differ in that same further call for a soy protein that is prepared by a method such that the soy protein is deflavored. Goodnight, Jr. et al teaches a soy protein material as called for in the instant claims (due to the similarity in processing of same). More specifically, the soy protein material of Goodnight, Jr. et al is prepared by pH a slurry of soybean, passing same through an ultrafiltration membrane which is expected to be polymeric, having a cutoff and employing processing temperature as claimed. The soy protein created therein is expected to be deflavored taking into account the similarity in processing between the instant invention ad that of Goodnight, Jr. et al (see cols. 2-4; examples). It would have been obvious to one having ordinary skill in the art at the time of the invention to have

employed this particular treated soy protein in the meat analogues because of the improved functionality and nutritional qualities of the treated soy protein (e.g. Abstract).

Page 3

The claims further call for the amount of soy protein in the meat analogue. However, determination of same would have been well within the purview of a skilled artisan, and, absent a showing of unexpected results, it would have been further obvious to have arrived at same as a matter of preference depending on the particular amount of soy protein needed/desired in the product, availability of same, cost, etc.

4. Claims 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over either one of Jennings or Ishizuka et al taken together with Goodnight, Jr. et al, Hayhurst et al, and Komatsu et al.

The claims further call for said meat analogue being a ham and cheese loaf.

Ham and cheese loafs are notoriously well known as taught, for example, by Hayhurst et al (Example 2). In addition, it is well known to employ soybean in ham analogues as taught, for example, by Komatsu et al (col.1, lines 49-63). It would have been obvious to one having ordinary skill in the art at the time of the invention to have prepared the meat analogue of Jennings and Ishizuka et al in the form of a ham and cheese loaf as a matter of preference depending on the particular meat analogue desired.

## **Double Patenting**

5. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated

Application/Control Number: 10/696,603

Art Unit: 1761

by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

6. Claims 1-10 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over either one of claims 22 and 23 of copending Application No. 11/209105 or claims 24-30 of copending Application No. 10/697402 in view of Goodnight, Jr. et al and either one of Jennings or Ishizuka et al.

The claims differ from the claims of copending Applications No. 11/209105 and 10/697402 in that the whey protein is soy milk protein material and that said soy protein is employed in a meat analogue. It would have been obvious to one having ordinary skill in the art at the time of the invention to have employed a soy protein source as the whey source which is to be deflavored as taught, for example, by Goodnight, Jr. et al as a matter of preference depending on, for example, availability of the protein source, the cost of same, etc. It is well known to employ soybean protein in meat analogues as taught, for example, by either one of Jennings or Ishizuka et al. It would have been obvious to one having ordinary skill in the art at the time of the invention to have employed the protein of the claims of 11/209105 or 10/697402 in meat analogues as a matter of preference.

The claims further call for the amount of soy protein in the meat analogue.

However, determination of same would have been well within the purview of a skilled artisan, and, absent a showing of unexpected results, it would have been further obvious to have arrived at same as a matter of preference depending on the particular amount of soy protein needed/desired in the product, availability of same, cost, etc.

This is a provisional obviousness-type double patenting rejection.

7. Claims 11 and 12 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over the claims and references as set forth in paragraph 6 above and further in view of Hayhurst et al, and Komatsu et al.

The claims further call for said meat analogue being a ham and cheese loaf.

Ham and cheese loafs are notoriously well known as taught, for example, by Hayhurst et al (Example 2). In addition, it is well known to employ soybean in ham analogues as taught, for example, by Komatsu et al (col.1, lines 49-63). It would have been obvious to one having ordinary skill in the art at the time of the invention to have prepared the meat analogue in the form of a ham and cheese loaf as a matter of preference depending on the particular meat analogue desired.

This is a provisional obviousness-type double patenting rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anthony Weier whose telephone number is 571-272-1409. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Milton Cano can be reached on 571-272-1398. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
